## Certified Innovation Manager

The exploitation of ideas and their correct use in the commercial area leads to innovations, which are an essential requirement for a successful business strategy.

The correct use of knowledge and ideas are major challenges for management. Many ideas are inaccurately valued, data is often insufficiently coordinated and therefore, many possible innovations are not recognized nor brought into the market. This is where the innovation manager takes over. From the handling of information and the coordination of the business field's activities, up to innovation, are the innovation manager's most important tasks.

### TARGET GROUP

- IT- and Service Manager
- Technology Transfer Manager
- Research Manager

### ABOUT THE EXAM

- All courses will be done by accredited training providers.
- Online examination.
- The exams will be done by iSQI as an independent certification body.
